

The science that shapes tomorrow starts here.

Dive into cutting-edge research in Chicago this April.

Join your scientific community for an outstanding program featuring talks from ground-breaking scientists driving discovery through biochemistry and molecular biology, including:

Persistence and serendipity in science: a poker analogy

Melissa J. Moore, professor at University of Massachusetts Chan Medical School

Novel GABA aminotransferase and ornithine aminotransferase inactivators as potential new treatments for epilepsy, pain and hepatocellular carcinoma

Richard Silverman, professor at Northwestern University

Celebrate discovery

Join your colleagues for a special closing reception at the Griffin Museum of Science and Industry. **Book your tickets when you register for the meeting.**

Register today to connect with your scientific community.
